- ① R.J. Blakemore (1994) “*Earthworms of south-east Queensland and their agronomic potential in brigalow soils*” Unpublished PhD Thesis, University of Queensland, 10th March, 1994. Pp. 605 including 80 figures. With the description of >75 species and reports of laboratory and glasshouse screening trials of over 30 of these with two medium-scale field experiments using a dozen candidate species. [Original copies lodged in libraries of UQ, Brisbane, and Division of Soils, Adelaide. Some colour photographs/tables did not copy over and WP pagination has changed slightly during conversion. The thesis research and report were completed in three years and one of the three referees commented that half the amount of work would have sufficed. It yet provides the most comprehensive guide to both native and exotic species in Australia. However, the taxonomy is now mostly superseded so please embargo unpublished species names & seek more recent information and publications].
